Hi Burt,

Just checking in to see if the data was requested. It think the results could help some of our discussions.

Jennifer,

Sounds worth requesting to me, I'll run it up the food chain.

Best regards,

Hi,

The Round 2 Comp Report mentions that the LWG recorded toxicity (mortality) endpoints during the Corbicula laboratory bioaccumulation tests. This data would be useful given it is a longer term (28-day) test. The results of this data are mentioned in the report, but the data is not presented. Can we request this data? Even though it is a different species, it may help refine some of the long term endpoints and response in the benthic toxicity assessment.
